PROJECTS

E.A.S.Y - Remote Health Monitoring | IoT, C++, React.js, Node.js

- Co-developed a full-stack IoT web platform for real-time patient monitoring, featuring live vital tracking.
- Led the hardware engineering module, integrating temperature, sonar, and pulse rate sensors.

Strivic Arena - EdTech Platform | React, TypeScript, Tailwind CSS, Vite

- Contributed to the frontend development of a role-based educational platform, building modular, responsive UI components using React and TypeScript.
- Integrated RESTful APIs for client-side data fetching and managed local React state to render dynamic, role-specific student and faculty dashboards.

Divyastra AI - Smart Traffic System | C++, RFID, Python, YOLOv8

- Developed the hardware module for an intelligent traffic control system using RFID sensors, later assisting in transitioning the prototype to a computer vision approach.
- Integrated a YOLOv8 computer vision model to identify emergency vehicles from camera feeds, enabling automated traffic signal overrides.
